

Replay Attack and Anti-Spoofing using F-ratio probing tool

Name: Jay Shah
ID:201501071

Overview of Stage - I

- used the F-ratio metric as a probing tool to analyze the impact of various speech factors to replay detection.
- To discover which frequency bands are most discriminative for detecting replayed speech.
- Factors like Speaker, Speech Phrase, Recording Environment, Recording Device, Playback Device.
- Check generalizability between training data and development data

Algorithm

- Read wav file
- Windowing and FFT
- Applying Mel filter bank
- Mean of frames on each filter bank
- Compute F-ratio on variability factor

Mel Triangular Filters(FFT to mel)

$$H_m(k) = \begin{cases} 0 & k < f(m-1) \\ \frac{k - f(m-1)}{f(m) - f(m-1)} & f(m-1) \leq k \leq f(m) \\ \frac{f(m+1) - k}{f(m+1) - f(m)} & f(m) \leq k \leq f(m+1) \\ 0 & k > f(m+1) \end{cases}$$

Algorithm

$$F_i = \frac{(\mu_i^g - \mu_i^r)^2}{\frac{1}{N_g} \sum_{x_i \in C_g} (x_i - \mu_i^g)^2 + \frac{1}{N_r} \sum_{x_i \in C_r} (x_i - \mu_i^r)^2}$$

where x_i represents the value of the i -th Fbank of the speech frame x , and μ_i^g and μ_i^r are the means of x_i of all the frames of the genuine speech class and the replayed speech class, respectively. N_g and N_r are the number of frames of the two classes.

Values

Number of filter banks -> 40

Window Length -> 0.025s

Step between successive windows -> 0.01s

ASV Spoof 2017 Database

- Training Data

Number of Genuine Utts. -> 1508

Number of Spoofed Utts. -> 1508

- Development Data

Number of Genuine Utts. -> 760

Number of Spoofed Utts. -> 950

ASV Spoof 2017 Database

File contains:-

- Wave file
- Speech type (Genuine, Spoof)
- Speaker(Variability Factor)
- Phrase(Variability Factor)
- Environment(Variability Factor)
- Playback Device(Variability Factor)
- Recording Device(Variability Factor)

ASV Spoof 2017 Database

Training:-

Number of Speakers -> 10

Number of Phrase -> 10

Number of Different Environment -> 2

Number of Playback Devices -> 3

Number of Recording Devices -> 1

ASV Spoof 2017 Database

Development:-

Number of Speakers -> 8

Number of Phrase -> 10

Number of Different Environment -> 6

Number of Playback Devices -> 6

Number of Recording Devices -> 7

Results

Variability Factor : Speaker

Variability Factor : Phrase

Variability Factor : Recording Environment

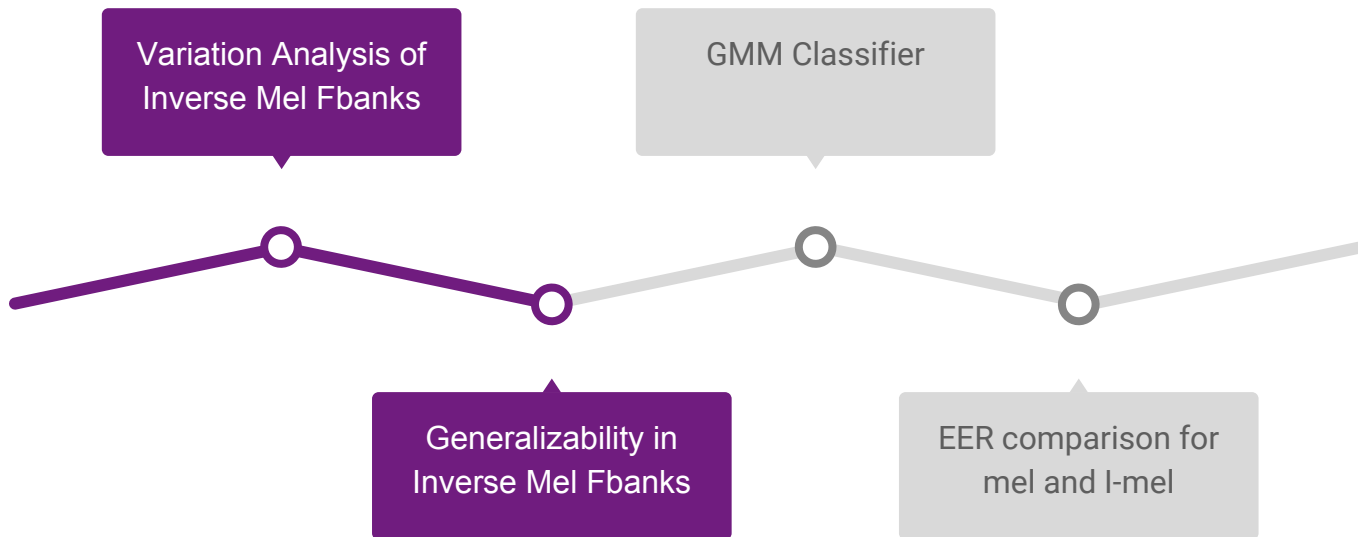

Variability Factor : Playback Device

Variability Factor : Recording Device

Timeline for Stage-III

Limitation of work

- Can not find discriminative information for replay detection for which frequency bands.
- More variation of F-ratio higher risk of overfitting.

Future Scope

- To discover which frequency bands are most discriminative for detecting replayed speech.
- the variation of the F-ratio patterns caused by a particular variability factor will reflect the impact of the factor and frequency warping to replay detection in generalizability.
- Factors like speaker identity, speech content, playback and recording device.

The background is a solid pink color. In the top right corner, there is a decorative pattern of overlapping geometric shapes, including triangles and squares, in various shades of pink and magenta.

Thank You
